NB 2163

CERTIFICATE OF CONFORMANCE

Certificate No: 2163-PPE-943/01

Respiratory protective devices, filtering half masks to protect against particles manufactured by

Shenzhen Yunyifu Health Technology Co., Ltd.

13A, Cedar Building B, No.52, Tairan Sixth Road, Tian 'an Community, Shatou Street, Futian District, Shenzhen City, China

Continues to fulfil the requirements of

EN 149:2001 + A1:2009 Respiratory Protective Devices -Filtering Half Masks to Protect Against Particles -Requirements, Testing, Marking

Based on the evaluation of test reports and internal quality control audit reports according to EN 149+A1:2009 and Personal Protective Equipment Regulation (EU) 2016/425 Annex VII (Module C2). This certificate implies that the manufactured products show below are in conformance with the approved EU Type Examination model and meets the requirements of the regulation.

Product Definition

| Model | Class | EU Type Examination Certificate | | | |
|----------|---------|---------------------------------|------------|---------------|--|
| . Wlodel | Class | Serial No | Date | Issuing NB No | |
| PM-P2 | FFP2 NR | 2163-PPE-943 | 05.07.2020 | 2163 | |

Here by the manufacturer is allowed to use notified body number (2163) and can fix CE mark, as shown below, on the Category III product models given above, with;

- Issuing an appropriate EU Declaration of Conformity according to Personal Protective Equipment Regulation (EU) 2016/425 Annex 9.
- Taking all measures necessary so that the manufacturing process and its monitoring
 ensure the homogeneity of production and conformity of the manufactured PPE with the
 type described in the EU type examination certificate.

This certificate is issued on 08/07/2020 and will be valid for one year, until 07/07/2021 if the manufacturer makes no major change in the product designs and manufacturing processes affecting the product performance on the essential health and safety requirement.

Manufacturer:

Name: Shenzhen Yunyifu Health Technology Co., Ltd.

Address: 13A Cedar Building B, No. 52, Tairan Sixth Road, Tian 'An Communi-

ty, Shatou St, Futian District, Shenzhen City, China.

1. PPE Category III: Filtering Half mask. Model PM-P2.

2. This declaration of conformity is issued under the sole responsibility of the manufacturer, and must accompany an EU type examination in addition to a conformity to type certificate based on internal production control and supervised product intervals.

3. Object of the declaration: Filtering Half Mask, White, Model PM-P2.

4. The object of the declaration described in point 4 is in conformity with the relevant Union harmonisation legislation: PPE Regulation EU 2016/425.

5. References to the relevant harmonised standards used, including the date of the standard, or references to the other technical specifications, including the date of the specification, in relation to which conformity is declared: EU 149:2001+A1:2009.

6. The notified body UNIVERSAL SERTIFIKASYON VE GÖZETİM HİZMETLERİ TİCARET LTD. ŞTİ. Necip Fazıl Bulvarı Keyap Sitesi E2 Blok No:44/84 Yukarı Dudullu Ümraniye / ISTANBUL / TÜRKİYE, NB 2163 performed the EU type-examination (Module B) and issued the EU type-examination certificate 2163-PPE-943.

7. The PPE is subject to the conformity assessment procedure: conformity to type based on internal production control plus supervised product checks at random intervals (Module C2) under surveillance of the notified body 2163.

EU TYPE EXAMINATION CERTIFICATE

Certificate No: 2163-PPE-943

Respiratory protective devices, filtering half masks to protect against particles manufactured by

Shenzhen Yunyifu Health Technology Co., Ltd.

13A, Cedar Building B, No.52, Tairan Sixth Road, Tian 'an Community, Shatou Street, Futian District, Shenzhen City, China

are tested and evaluated according to

EN 149:2001 + A1:2009 Respiratory Protective Devices -Filtering Half Masks to Protect Against Particles -Requirements, Testing, Marking

Based on the type examination conducted with the evaluation of test reports, technical file according to Personal Protective Equipment Regulation (EU) 2016/425 Annex 5, it is approved that the product meets the requirements of the regulation.

Product Definition

Single shift use particle filtering half mask for protection against solid and liquid aerosols, is a folding type, 5 layers cotton and polypropylene fabrics, without valve, fitted with ear straps, with nose sponge strip and internal nose clip.

Brand Name: YUNYIFU Model: PM-P2 Classification: FFP2 NR
Model have White, Purple, Black, Orange, Pink, Cyan, Blue, Orange/ Black multi-colour, Grey,
and Red versions

Here by the manufacturer is allowed to use notified body number (2163) and can fix CE mark, as shown below, on the Category III product models given above, with;

- Issuing an appropriate EU Declaration of Conformity according to Personal Protective Equipment Regulation (EU) 2016/425 Annex 9.
- Ongoing successful performance in fulfilment of the requirements set out in Personal Protective Equipment Regulation (EU) 2016/425 and harmonised standards, ensured by assessments based on Annex 7 (Module C2) or Annex 8 (Module D) of the regulation

This certificate is initially issued on 05/07/2020 and will be valid for 5 years, if there is no change in the relevant harmonised standard affecting the essential health and safety requirements.

Suat KACMAZ
UNIVERSAL CERTIFICATION
Director

This certificate is re-issued on 22.12.2020 (Rev1) with coloured versions of the model. For details refer to the technical evaluation report provided to the manufacturer.

TECHNICAL ASSESSMENT REPORT

REPORT DATE / NO: 22.12.2020 / 2163-KKD-943 / R1

Initial Report Date and Number: 05.07.2020 / KKD-2163-943

This technical evaluation report is enriched and updated with the use of the same fabric as defined in the initial technical file with colored versions in the outher most layer of the mask and earloops. There is no other design or material change in the colored versions of the model. See relevant test reports on the material innocousness of the material.

Manufacturer: Shenzhen Yunyifu Health Technology Co., Ltd.

Address: 13A, Cedar Building B, No.52, Tairan Sixth Road, Tian 'an Community, Shatou Street, Futian District, Shenzhen City, China

This report is for the, given above, accolicant body prepared according to the test results report conducted by UNIVERSAL CERTIFICATION dated 02.07.2020 with Serial No 06-2020-T0190 based on EN 149: 2001 + A1: 2009 standard and the technical file dated 04 July 2020 Version 01 provided by the manufacturer.

The technical file of the manufacturer, and risk evaluation against the essential health safety requirements and the test report evaluated for their relation with Essential Requirements of Personel Protective Equipment Regulation and found to be appropriate.

This report is an annex and an integral part of the EU Type Examination Certificate issued to the manufacturer. The test results and issued certificate belongs only to the tested model. The technical report consists of a total of 6 pages.

Product Description: Single shift use particle filtering half mask for protection against solid and liquid aerosols, is a folding type, 5 layers cotton and polypropylene fabrics, without valve, fitted with ear straps, with nose sponge strip and internal nose clip.

Component and Materials:

| Component | Material | Grade / Size | |
|--------------------|-------------------------------|--|--|
| 1st layer (Outer) | Spunbond Non-Wowen Fabric | 50 g/m ² (±2.5 g/m ²) | |
| 2nd layer | Melt-blown - non-wowen fabric | $25 \text{ g/m}^2 (\pm 2.5 \text{ g/m}^2)$ | |
| 3rd layer | Melt-blown - non-wowen fabric | $25 \text{ g/m}^2 (\pm 2.5 \text{ g/m}^2)$ | |
| 4th layer | Es Filter Cotton | $40 \text{ g/m}^2 (\pm 2.5 \text{ g/m}^2)$ | |
| 5th layer (Inner) | Spunbond Non-Wowen Fabric | $25 \text{ g/m}^2 (\pm 2.5 \text{ g/m}^2)$ | |
| Internal Nose Clip | PP + Metal Strip | 91 mm (±1 mm) | |
| Sponge Strip | Sponge Strip | 75 mm (±1 mm) | |
| Ear Strap | Nylon with Spandex | 21 cm (±0.3 cm) | |

Classification: FFP2 NR

Trademark: YUNYIFU Model: PM-P2

Page 1 | 6

ESSENTIAL HEALTH and SAFETY REQUIREMENTS GIVEN IN EUROPEAN UNION REGULATION EU 2016/425 CORRESPONDING RISKS FOR THE PRODUCT

1.1. Design principles

1.1.1. Ergonomics

PPE must be so designed and manufactured that in the foreseeable conditions of use for which it is intended the user can perform the risk related activity normally whilst enjoying appropriate protection of the highest prossible level. The test resuts with human subjects did not report any problem with the ergonomics of the product.

1.1.2. Levels and classes of protection

1.1.2.1. Highest level of protection possible

The optimum level of protection to be taken into account in the design is that beyond which the constraints by the wearing of the PPE would prevent its effective use during the period of exposure to the risk or normal performance of the activity.

1.1.2.2. Classes of protection appropriate to different levels of risk

Where differing foreseeable conditions of use are such that several levels of the same risk can be distinguished, appropriate classes of protection must be taken into account in the design of the PPE.

1.2. Innocuousness of PPE

1.2.1. Absence of risks and other inherent nuisance factors

PPE must be so designed and manufactured as to preclude risks and other nuisance factors under fore seeable conditions of use. The manufacturer declares in his technical file that according to the results of risk analysis and the material properties they use in the manufacturing, the product has no hazardous content for health.

1.2.1.1. Suitable constituent materials

The materials of which the PPE is made, including any of their possible decomposition products, must not adversely affect the health or safety of users. The material selection is processed in the technical manufacturing process and documented.

1.2.1.2. Satisfactory surface condition of all PPE parts in contact with the user

Any part of the PPE that is in contact or is liable to come into contact with the user when the PPE is worn must be free of rough surfaces, sharp edges, sharp points and the like which could cause excessive irritation or injuries is evaluated and reported in the test report.

1.2.1.3. Maximum permessible user impediment

Any inpediment caused by PPE to movements to be made, postures to be adopted and sensory perception must be minimized; nor must PPE cause movements which endanger the user or other persons.

1.3 Comfort and effectiveness

1.3.1. Adaptation of PPE to user morphology

PPE must be designed and manufactured in such a way as to facilitate its correct positioning on the user and to remain in place for the foreseeable period of use, bearing in mind ambient factors, the actions to be carried out and the postures to be adopted. For this purpose, it must be possible to adapt the PPE to fit the morphology of the user by all appropriate means, such as adequate adjustment and attachment systems or the provision of an adequate range of sizes.

1.3.2. Lightness and design strength

PPE must be as light as possible without prejudicing design strength and efficiency.

Apart from the specific additional requirements which they must satisfy in order to provide adequate protection against the risks in question (see 3), PPE must be capable of withstanding the effects of ambient phenomena inherent under the foreseeable conditions of use

1.4. Information supplied by the manufacturer

The notes that must be drawn up by the former and supplied when PPE is placed on the market must contain all relevant information on:

- a) In addition to the name and addressof the manufacturer and/or his authorized representative established in the Community
- b) Storage, use, cleaning, maintenance, servicing and disinfection. cleaning, maintenance or disinfectant protection recommended by manufacturers must have no adverse effect on PPE or users when applied in accordance with the relevant instructions;
- c) Performance as recorded during technical tests to check the levels or classes of protection provided by the PPE in guestion;
- d) Suitable PPE accessories and the characteristics of appropriate spare parts;
- e) The classes of protection appropriate to different levels of risk and the corresponding limits of use;
- f) The obsolescence deadlineor period of obsolescence of PPEor certain of its components;
- g) The type of packaging suitable for transport;
- h) The significance of any markings(see 2.12)
- i) Where appropriate the references of the Directives applied inaccordance with Article5(6) (b);
- j) The name, address and identification number of the notified body involved in the design stage of the PPE

These notes, which must be precise and comprehensible, must be provided at least in the official language(s) of the member state of destination

UFR-383 12.12.2018 Rev.01

2. ADDITIONAL REQUIREMENTS COMMON TO SEVERAL CLASSES OR TYPES OF PPE

2.1. PPE incorporating adjustment systems

If PPE incorporates adjustment systems, the latter must be designed and manufactured so that, after adjustment, they do not become undone unintentionally in the foreseeable conditions of use.

2.3. PPE for the face, eyes and respiratory system

Any restriction of the user's face, eyes, field of vision or respiratory system by the PPE shall be minimised.

The screens for those types of PPE must have a degree of optical neutrality that is compatible with the degree of precision and the duration of the activities of the user.

If necessary, such PPE must be treated or provided with means to prevent misting-up.

Models of PPE intended for users requiring sight correction must be compatible with the wearing of spectacles or contact lenses.

2.4. PPE subject to ageing

If it is known that the design performance of new PPE may be significantly affected by ageing, the month and year of manufacture and/or, if possible, the month and year of obsolescence must be indelibly and unambiguously marked on each item of PPE placed on the market and on its packaging.

If the manufacturer is unable to give an undertaking with regard to the useful life of the PPE, his instructions must provide all the information necessary to enable the purchaser or user to establish a reasonable obsolescence month and year, taking into account the quality level of the model and the effective conditions of storage, use, cleaning, servicing and maintenance.

Where appreciable and rapid deterioration in PPE performance is likely to be caused by ageing resulting from the periodic use of a cleaning process recommended by the manufacturer, the latter must, if possible, affix a marking to each item of PPE placed on the market indicating the maximum number of cleaning operations that may be carried out before the equipment needs to be inspected or discarded. Where such a marking is not affixed, the manufacturer must give that information in his instructions. The product is for single use and tested with simulated wearing conditioning.

2.6. PPE for use in potentially explosive atmospheres

PPE intended for use in potentially explosive atmospheres must be designed and manufactured in such a way that it cannot be the source of an electric, electrostatic or impact-induced arc or spark likely to cause an explosive mixture to ignite.

2.8. PPE for intervention in very dangerous situations

The instructions supplied by the manufacturer with PPE for intervention in very dangerous situations must include, in particular, data intended for competent, trained persons who are qualified to interpret them and ensure their application by the user.

The instructions must also describe the procedure to be adopted in order to verify that PPE is correctly adjusted and functional when worn by the user. Where PPE incorporates an alarm which is activated in the absence of the level of protection normally provided, the alarm must be designed and placed so that it can be perceived by the user in the foreseeable conditions of use.

2.9. PPE incorporating components which can be adjusted or removed by the user

Where PPE incorporates components which can be attached, adjusted or removed by the user for replacement purposes, such components must be designed and manufactured so that they can be easily attached, adjusted and removed without tools.

2.12. PPE bearing one or more identification or recognition marks directly or indirectly relating to health and safety

The identification or recognition marks directly or indirectly relating to health and safety affixed to these types or classes of must preferably take the form of harmonized pictograms or ideograms and must rem ain perfectly legible throughout the foreseeableuseful life of the PPE. In addition, these marks must be complete, precise and comprehensible so as to prevent any misinterpretation; in particular, where such marks incorporate words or sentences, the latter must appear in the official language(s) of the Member State where the equipment is to be used.

If PPE (or a PPE component) is too small to allow al lor part of the necessary marking to be affixed, the relevant information must be mentioned on the packing and in the manufacturer's notes.

3. ADDITIONAL REQUIREMENTS SPECIFIC TO PARTICULAR RISKS

3.10.1. Respiratory protection

PPE intended for the protection of the respiratory system must make it possible to supply the user with breathable air when exposed to a polluted atmosphere and/or an atmosphere having an inadequate oxygen concentration.

The breathable air supplied to the user by PPE must be obtained by appropriate means, for example after filtration of the polluted air through PPE or by supply from an external unpolluted source.

The constituent materials and other components of those types of PPE must be chosen or designed and incorporated so as to ensure appropriate user respiration and respiratory hygiene for the period of wear concerned under the foreseeable conditions of use.

The leak-tightness of the facepiece and the pressure drop on inspiration and, in the case of the filtering devices, purification capacity must keep contaminant penetration from a polluted atmosphere low enough not to be prejudicial to the health or hygiene of the user.

The PPE must bear details of the specific characteristics of the equipment which, in conjunction with the instructions, enable a trained and qualified user to employ the PPE correctly.

In the case of filtering equipment, the manufacturer's instructions must also indicate the time limit for the storage of new filters kept in their original packaging.

| Article | Clogging: This test is not applied to Particle Filtering Half Mask which is not reusable. |
|-----------------|--|
| Article 7.18 | (For single shift use devices, the clogging test is optional test. For re-usable devices test is mandatory.) Demountable Parts: There are no demountable parts of the mask. |
| Article 8 | Testing: All tests conducted according to Clause 8 of this standard is available in the test report and are evaluated in this report for qualification and classification of the mask. |
| | Marking – Packaging: Necessary markings are available on the product package (box). The manufacturer and its trademark is clearly visible. The type of the mask and the classification including the status of re-usability, the reference to EN 149:2001+A1:2009 standard, the end date of shelf life, uisng and storage instructions and pictograms and CE mark are available on the product package. The above evaluation is based on the technical document for packaging and marking, for box design. Verified on the Annex 9.1 of the technical file. |
| Article 9 | The technical documentation for mask design (drawing) also evaluated for marking requirements, drawing PM-P2. The mask template (drawing) indicates that the mask will carry information about the manufacturer, Type of mask, the reference to EN 149+A1:2009 standard and classification including the re-usability of the mask. The manufacturer also printed CE mark with our Notified Body number. The mask do not have sub-assemblies. The marking statement given in the technical documentation was not available on the tested specimen, the manufacturer shall consider to use the marking as stated in the technical file in case of serial manufacturing. Model PM-P2 drawing exists in the technical file of the manufacturer, Annex 6 of technical file. |
| Article | Information to be supplied by the manufacturer: In each of the smallest commercially available packaging of the product, implementation (installation instructions) pre-use controls, warning and usage limitations, storage and meanings of symbols / pictograms are defined. User instruction document in the technical file found to be appropriate. The manufacturer shall include this documented user information text in every smallest commertially available package, Annex 8 of Technical file. |
